

LILIANE NYAMY KONISSI

DevOps Engineer | Cloud Engineer | Site Reliability Engineer | Platform Engineer

Glen Burnie, MD 21061 • (210) 789-6553 • konissili@gmail.com • linkedin.com/in/liliane-2021 • github.com/lily4499 • lilianek.site

PROFESSIONAL SUMMARY

Results-driven **DevOps Engineer with 5+ years of experience** designing, automating, and maintaining scalable cloud infrastructure and CI/CD pipelines on AWS. Proven ability to accelerate software delivery cycles, improve system reliability, and reduce operational overhead through **Infrastructure as Code (Terraform)**, **container orchestration (Kubernetes/EKS)**, and end-to-end pipeline automation (Jenkins, GitHub Actions). Skilled in **Prometheus/Grafana observability**, security hardening (Trivy, tfsec, Vault), Bash/Python scripting, and incident response. Effective collaborator with cross-functional development, QA, and operations teams. Eligible for DevOps Engineer, Cloud Engineer, SRE, Platform Engineer, Infrastructure Engineer, Kubernetes Engineer, Linux Administrator, Automation Engineer, Build & Release Engineer, and Cloud Support Engineer roles.

CORE TECHNICAL SKILLS

Cloud Platforms:	AWS (EC2, EKS, ECS, RDS, S3, VPC, IAM, CloudWatch, ALB/NLB, Route 53, Secrets Manager); foundational Azure & GCP
Infrastructure as Code:	Terraform (modules, remote state, workspaces), CloudFormation, Terragrunt
Containers & Orchestration:	Docker, Kubernetes, Amazon EKS, Helm, Deployments, Services, Ingress, RBAC, HPA/VPA, ConfigMaps, Secrets
CI/CD & GitOps:	Jenkins, GitHub Actions, GitLab CI, Argo CD, DockerHub, artifact management, branching strategies
Automation & Scripting:	Bash, Python, Ansible, Linux shell scripting, cron, systemd
Monitoring & Observability:	Prometheus, Grafana, CloudWatch, ELK/EFK stack, alerting, dashboards, log analysis, runbooks
Security & Compliance:	IAM least-privilege, Security Groups, AWS Secrets Manager, HashiCorp Vault, Trivy, tfsec, vulnerability scanning, SAST integration
Networking:	DNS, TCP/IP, VPC design, subnets, routing tables, NAT Gateway, load balancing, firewall rules
Databases & Storage:	PostgreSQL, MySQL, Redis; RDS management, S3 lifecycle policies, backup & recovery
Reliability & SRE:	Incident response, SLI/SLO/SLA, root-cause analysis, blue-green & canary deployments, rolling updates, disaster recovery
Tools & Practices:	Git, GitHub, pull requests, code review, Agile/Scrum, technical documentation, Confluence/Jira

PROFESSIONAL EXPERIENCE

DevOps Engineer | Data Service Group

Bear, DE | January 2022 – Present

- Architected and maintained **AWS cloud infrastructure** (EC2, EKS, RDS, S3, VPC, IAM, CloudWatch, ALB) supporting development, staging, and production environments, achieving **99.9% uptime** across critical application workloads.
- Designed and implemented **end-to-end CI/CD pipelines** using Jenkins and GitHub Actions, automating code checkout, build, unit test, security scan, Docker image creation, DockerHub push, and Helm-based Kubernetes deployment — **reducing average release cycle time by ~40%**.
- Provisioned and managed reusable **Terraform modules** for VPC, subnets, security groups, EC2, S3, IAM roles, and EKS clusters, cutting manual infrastructure provisioning effort by over 60% and ensuring environment consistency across teams.
- Administered **Amazon EKS clusters** including Deployments, Services, Ingress controllers, ConfigMaps, Secrets, RBAC policies, Horizontal Pod Autoscaler (HPA), and namespace isolation — supporting 10+ microservices in production.

- Built and maintained **Helm charts and reusable Kubernetes templates** to standardize multi-environment application deployments, eliminating configuration drift between dev, staging, and production.
- Containerized legacy and greenfield application services using **Docker**, optimizing multi-stage Dockerfiles to reduce image sizes by up to 50% and eliminate environment inconsistency issues.
- Integrated **Trivy and tfsec** security scans into CI/CD pipelines as automated quality gates, blocking vulnerable container images and misconfigured IaC from reaching production.
- Deployed a full **Prometheus + Grafana + CloudWatch + ELK** observability stack; created dashboards tracking CPU, memory, pod health, error rates, and latency — reducing mean time to detect (MTTD) incidents by ~35%.
- Authored **Bash and Python automation scripts** for deployment health checks, log rotation, S3 backup validation, service restart workflows, and scheduled maintenance, saving an estimated 8+ hours of manual ops work per week.
- Led production incident response: reviewed CloudWatch logs and Grafana metrics, identified root causes for deployment failures, authored RCA reports, and implemented preventive runbooks — improving MTTR by 30%.
- Enforced secrets hygiene by migrating hardcoded credentials to **AWS Secrets Manager and HashiCorp Vault**, eliminating exposed secrets from application configurations and source code.
- Collaborated with 5+ development and QA teams to define deployment gates, rollback procedures, and release checklists, improving release confidence and reducing post-deployment rollbacks.

Freelance Cloud & DevOps Engineer | Independent / Project-Based

Douala, Cameroon | June 2019 – December 2021

- Delivered **Linux system administration, cloud configuration, and DevOps automation** for small businesses and project-based clients — covering Ubuntu/CentOS server setup, user management, firewall rules, package updates, and service monitoring.
- Containerized client applications using **Docker and Docker Compose**, standardizing local development and testing environments and reducing environment-related deployment failures.
- Migrated client teams from fully manual deployments to **Git-based, repeatable deployment workflows** using Docker and basic CI/CD practices, improving release reliability and traceability.
- Configured **AWS EC2, S3, IAM, Security Groups, and CloudWatch** resources for client workloads, enabling basic cloud hosting and monitoring for web applications.
- Wrote **Bash automation scripts** for scheduled backups, log cleanup, service health checks, and restart workflows — reducing manual support effort for recurring operational tasks.
- Performed basic **MySQL and PostgreSQL database backup and recovery** tasks, verifying data integrity and documenting procedures for client operations teams.
- Produced thorough **runbooks, deployment guides, and troubleshooting documentation** for client handoff, enabling teams to self-manage routine infrastructure tasks.

SELECTED PROJECTS

EKS Platform Deployment & Automation

Designed and deployed a production-ready Kubernetes platform on **Amazon EKS** using Terraform for infrastructure provisioning, Helm for application deployment, and CloudWatch + Prometheus for observability. Automated end-to-end workflows for provisioning, deployment, scaling, monitoring, and rollback.

Tools: AWS EKS, Terraform, Docker, Helm, Kubernetes, Prometheus, CloudWatch, Jenkins, GitHub Actions

CI/CD Pipeline Modernization

Built reusable, parameterized **CI/CD pipeline templates** in Jenkins and GitHub Actions covering code checkout, build, unit test, Trivy security scan, Docker image build/push to DockerHub, and Helm-based Kubernetes deployment. Reduced pipeline build time and standardized release workflows across multiple services.

Tools: Jenkins, GitHub Actions, Docker, DockerHub, Trivy, Helm, Kubernetes

Monitoring & Observability Platform

Implemented a centralized observability stack with **Prometheus, Grafana, CloudWatch, and ELK**. Configured custom dashboards tracking latency, error rates, pod health, resource utilization, and service availability. Set up alerting rules and on-call runbooks to reduce MTTD/MTTR.

Tools: Prometheus, Grafana, CloudWatch, ELK Stack, Kubernetes, Linux

GitOps & Kubernetes Release Strategy Demo

Built a comprehensive Kubernetes release strategy reference implementation showcasing **rolling updates**, **blue-green deployments**, **canary releases**, Helm chart templating, **Argo CD GitOps** continuous sync, Prometheus/Grafana monitoring, and automated rollback procedures. Published on GitHub as a portfolio reference.

Tools: Kubernetes, Helm, Argo CD, GitOps, Prometheus, Grafana, Docker, GitHub

AWS Infrastructure Automation with Terraform

Created modular, reusable **Terraform configurations** for AWS infrastructure including VPC, subnets, route tables, NAT Gateway, security groups, EC2, S3, IAM roles/policies, and EKS cluster resources. Used remote state (S3 + DynamoDB lock) for team-safe infrastructure management.

Tools: Terraform, AWS (VPC, EC2, S3, IAM, EKS), S3 Remote State, DynamoDB

EDUCATION

Master of Business Administration (MBA) – Management

ESSEC Business School | Douala, Cameroon | June 2015

CERTIFICATIONS IN PROGRESS

- AWS Certified Solutions Architect – Associate (in progress)
- Certified Kubernetes Administrator (CKA) – (in progress)
- HashiCorp Certified: Terraform Associate – (in progress)

ADDITIONAL INFORMATION

Open to roles: DevOps Engineer, Cloud Engineer, Site Reliability Engineer (SRE), Platform Engineer, Infrastructure Engineer, Kubernetes Engineer, Linux Systems Engineer, Automation Engineer, Build & Release Engineer, Cloud Support Engineer.

Portfolio & GitHub: Terraform modules, Helm charts, Kubernetes manifests, CI/CD pipeline templates, Argo CD GitOps configs, and DevOps documentation available at github.com/lily4499 and lilianek.site.
